Note: version 2.0 of the post-processing

The new Unity post-processing stack is a post-process pipeline. This has a few advantages:

- Effects are always configured in the camera
- It allows combination of many effects in one camera
- It features an asset-based configuration
- All effects are grouped together in the UI

Package contents 31.1 MB

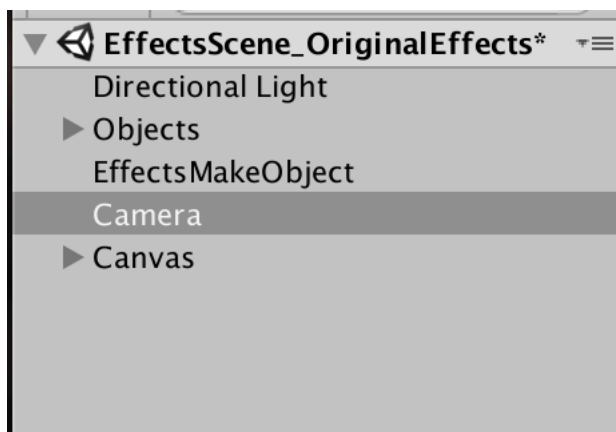

Releases current ver. 1.0.4 [Show More](#)

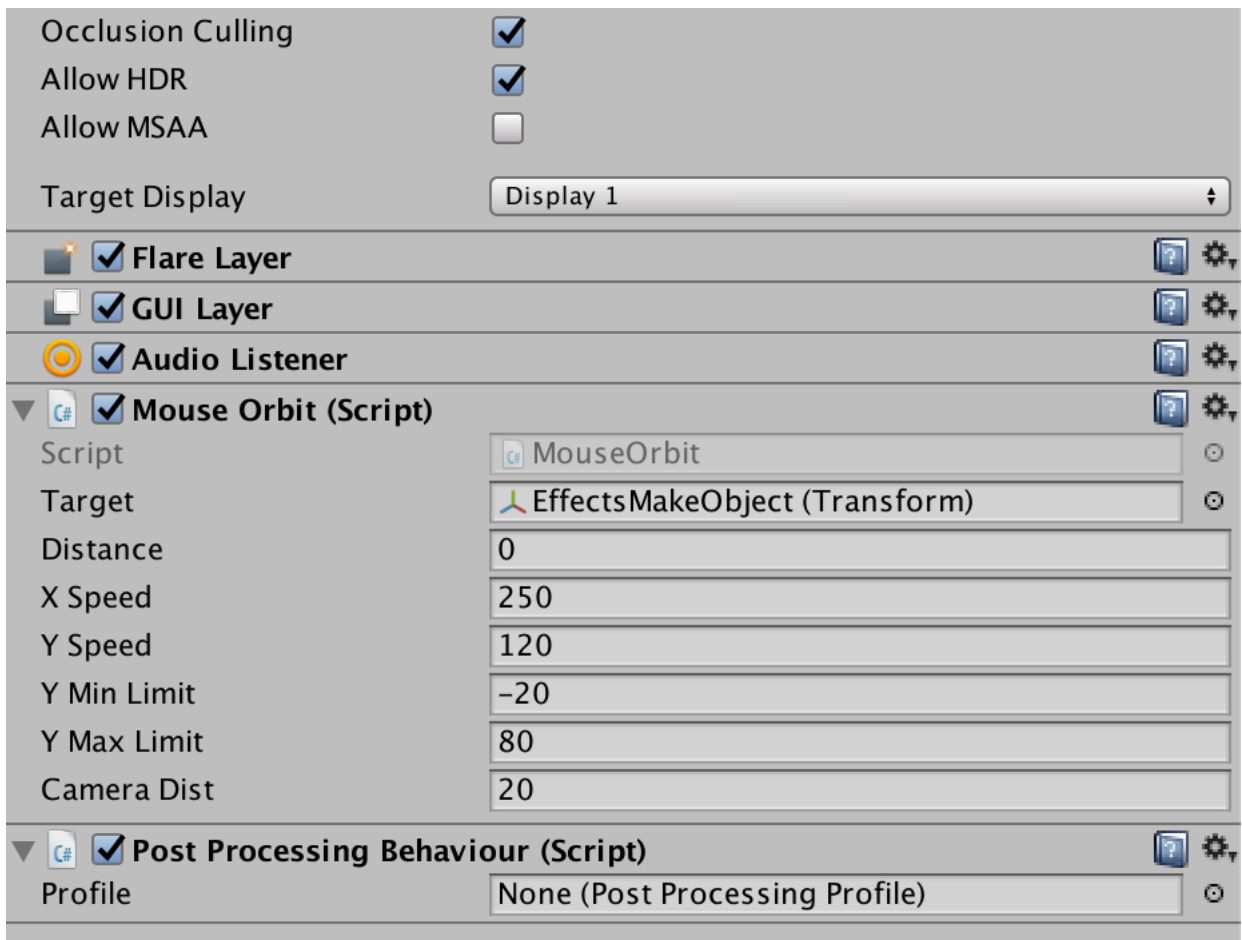

Supported Unity versions 5.5.0 or higher
